Using Thunderbird to Check Email

Thunderbird is a free email client, available for download at:
[http://www.mozilla.com/en-US/thunderbird/.](http://www.mozilla.com/en-US/thunderbird/)

To configure Thunderbird for use with your POP email service:

Open Thunderbird

Click **Edit**

Click **Account Settings**

Click **Add Account** in the bottom left

Select Email Account

Click **Next**

Enter the following information:

- **Your Name** - What you want your recipients to see
- **Email address** -

Click **Next**

Select POP"

- **Incoming server** is mail.yoursitedomain.com
- **Outgoing server** This is that of mail.yoursitedomain.com as well. However, currently many ISP s block access to this port and you have trouble with outgoing mail function you should enter the smtp-server provided to you by your ISP
